Due to the low volume being ordered we are unable to offer color matching. The graphic provided will print how the software interprets it. Adjustments can be made, but it will incur an additional run charge.

## WHY DO DARK SHIRTS COST MORE?

Dark DTG printing is similar to Light DTG printing, except that it uses white ink. It is also 3-4 times more expensive. The only way to achieve true ink colors is to print on a white shirt or lay down white under your image. This is where dark DTG printing comes in handy. If you need to print on a black shirt, you need dark DTG printing.

100% deposit required to start job. Net terms accounts are available through approval with our accounting department.
